OBJECTIVE

Full Stack Developer focused on software development, corporate systems, and scalable solutions.

PROFESSIONAL SUMMARY

Full Stack Developer with experience building corporate systems, web applications, REST APIs, and service integrations. I work with Node.js, Fastify, TypeScript, React, Next.js, PostgreSQL, Prisma ORM, and Redis, delivering scalable solutions focused on performance, code quality, and operational efficiency. I have hands-on experience with Docker, Git, CI/CD, agile methodologies, and collaborative work in multidisciplinary teams.

Experienced across the full software development lifecycle — from data modeling and business logic implementation to building modern interfaces and API integrations. Analytical mindset with a strong ability to understand business processes and translate them into technology solutions that deliver concrete results.

PROFESSIONAL EXPERIENCE

NewSun Energy Group | Full Stack Developer | Jan/2026 – Present

- Worked as Full Stack Developer on internal corporate system solutions, covering everything from designing scalable backend REST APIs to frontend integration, with a focus on code organization, performance, and business value generation.
- Built scalable REST APIs using Node.js, Fastify, and TypeScript, implementing complex business rules, paginated endpoints, transactional operations, and cross-system integrations.
- Designed data models and managed PostgreSQL migrations using Prisma ORM, ensuring integrity, consistency, and high query performance.
- Integrated Redis for caching and performance optimization in high-demand corporate systems.
- Standardized development environments using Docker and Docker Compose in a monorepo infrastructure with PNPM, ensuring consistency across environments and streamlined onboarding.
- Used Git for version control, participating in Pull Requests, Code Reviews, and Continuous Integration/Continuous Delivery (CI/CD) practices.
- Managed tasks in Jira, participating in sprint planning, technical refinements, task tracking, and agile ceremonies.
- Actively participated in daily stand-ups, debugging, complex integrations, and technical support for team members, contributing to the continuous evolution of systems and processes.

QuadCode | Software Developer | Jul/2025 - Aug/2025

- Developed a web application for managing live stream participants and generating real-time rankings.
- Used HTML, CSS, and JavaScript on the frontend, implementing interactive forms and client-side data validation.
- Integrated Firebase Realtime Database for data persistence and real-time synchronization between client and server.
- Implemented interaction processing logic during live broadcasts and optimized the real-time user experience.

Filterfeed | Junior Developer | Feb/2025 - Jun/2025

- Implemented correction scripts in the Ploomes CRM after identifying critical integration failures, reducing errors by 80% and eliminating rework for the sales team.
- Developed over 15 Python scripts to automate reports and data analyses, cutting strategic information delivery time by 70%.
- Automated monitoring and closing of stalled opportunities in the sales funnel, increasing the data update rate by 30% and improving commercial management.
- Conducted exploratory and functional testing across multiple integrated APIs, ensuring 100% technical stability in deliverables and preventing production failures.
- Restructured automated workflows within the CRM to reduce operational bottlenecks, boosting sales team productivity and improving the customer experience.
- Actively participated in stakeholder alignment meetings to understand technical requirements and deliver tailored solutions, strengthening partnerships with business areas.
- Used Kanban methodology to organize and track activity flow, ensuring greater task visibility and efficient demand prioritization.

Bayáh Caraíva | Commercial Manager | Jul/2023 - Mar/2024

- Structured and implemented full inventory and shipping manifest control, correcting previous failures and ensuring operational accuracy in logistics processes.
- Systematized new item registration in the system, reducing product search time and increasing team efficiency by 30%.
- Restructured in-store customer service, which raised satisfaction scores and improved the unit's average transaction value.
- Optimized merchandise replenishment based on inventory turnover analysis, reducing losses and preventing stockouts of strategic products.
- Directly negotiated with suppliers and local partners, securing more favorable terms and increasing the operation's commercial margin.

Vitorina Brasil | Co-Founder & Director | May/2020 - May/2023

- Led brand development from the ground up, positioning it among the most recognized names in the independent fashion segment in Bahia, Brazil.
- Drove the creation and expansion of the marketplace, generating revenue growth and expanding digital presence through direct sales strategies and targeted partnerships.
- Implemented production control and inventory management processes that reduced losses and increased operational efficiency across the entire supply chain.

- Coordinated the brand's formal registration with Brazil's INPI (National Institute of Industrial Property), securing legal protection and visual identity exclusivity.
- Managed all e-commerce and digital operations, driving sales scalability and consolidating the brand's online presence.

EDUCATION

- Full Stack Python Developer (EBAC) — 2024/2025
- Programming and Metaverse (Infinity School) — 2022/2023
- Bachelor's Degree in Business Administration (UNIJORGE) — 2018

RELEVANT PROJECTS

- **[Twitter \(10/2025\)](#)**: Fullstack application built with Python using Django and Django REST Framework, React + TypeScript. The project uses Poetry for dependency management, Docker for environment orchestration, and PostgreSQL as the database. Features include JWT authentication, user and profile management, tweets, followers, and a personalized feed. The frontend consumes the API via Axios, styled with Tailwind CSS and React Router, delivering a modern and responsive interface. Deployed with Render, Vercel, and Cloudinary, integrating GitHub Actions for CI/CD and automated testing.
- **[Caio Portfolio \(10/2025\)](#)**: Personal portfolio project developed to showcase my technical skills and growth as a fullstack developer. The application was built with a focus on performance, scalable architecture, and responsive design, using Next.js, React, TailwindCSS, Radix UI, Framer Motion, and Recharts. The codebase adopts TypeScript and Zod to ensure safety and quality, along with best practices in component structure and organization. The result is a fluid, modern, and visually consistent experience designed to professionally present projects and technical competencies.
- **[OpenAI Diet Planner \(09/2025\)](#)**: AI-powered project for automated generation of personalized meal plans. Built with Node.js on the backend and Next.js + React on the frontend, ensuring a modular and scalable architecture. The application consumes REST APIs to interact with an OpenAI agent, delivering results in real time. The frontend was crafted with a focus on responsive design, component-based architecture, data validation, and software engineering best practices, providing a fluid and modern user experience.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python, HTML5, CSS3

Frontend: Next.js, React, Tailwind CSS, Radix UI, Axios, React Router

Backend: Node.js, Fastify, Django, Django REST Framework, REST APIs

Databases: PostgreSQL, MySQL, Redis

ORMs & Persistence: Prisma ORM

DevOps & Infrastructure: Docker, Docker Compose, GitHub Actions, CI/CD, PNPM

Tools & Environments: Git, GitHub, Jira, Postman, Poetry

Code Quality & Standards: Flake8, Black, Isort, Pytest

Agile Methodologies: Scrum, Kanban

COURSES / COMPLEMENTARY ACTIVITIES

Certificate of Achievement - 89° Python Floripa Community – 08/2025
